THE NEW AGE TREATMENT

STEEPED IN TRADITION

HEALTHY SKIN IS BRIGHTER SKIN

Unhealthy, pigmented skin is obvious to the naked eye. No matter how much you may try to hide it under layers of make-up, an uneven skin tone or texture will show through.

Ageing, stress and the environment all have an impact on the skin causing it to develop pigmentation related problems like an uneven skin tone, rough texture, dark patches or spots. Poor diet and medication can also play a role in contributing towards unhealthy skin and an uneven complexion. Darker skin types also tend to be more prone to pigmentation problems.

DMK's Bihaku treatment is the answer to all these problems.

A BRIGHTER SKIN SOLUTION, THE SAFE AND NATURAL WAY

DMK have developed a professional Bihaku skin brightening treatment that works to help you regain a brighter, lighter, more even complexion with a healthy glow. The treatment is also used to revise uneven skin tone, discoloration and all types of skin pigmentation problems. It is the perfect solution to revise a lacklustre or rough complexion. DMK's Bihaku treatment has been designed to assist in the repair of:

- » Dark circles around the eyes
- » Skin genetically prone to pigmentation problems
- » Uneven skin tone and texture
- » Thickened, rough or coarse skin
- » Darker skin types like Asian, Indian, Lebanese, Mediterranean skin etc.

The DMK Bihaku treatments also help to repair hyperpigmentation like melasma, acne marks, freckles and age or dark spots. It does not permanently or temporarily alter the natural skin colour you were born with, but helps you achieve a brighter more beautiful complexion. It is suitable for all races and skin types.

HOW DMK BIHAKU TREATMENTS WORK

DMK Bihaku Skin Brightening Treatments are designed to restore and regulate the way your skin naturally functions. The result is a natural, brighter and healthy complexion. It is the way your skin was meant to be.

The combination formula moves the pigment in the skin to the upper layers of the epidermis where it can be removed. The formula also contains melanin inhibitors to regulate tyrosine and tyrosinase from producing excess pigment.

A flushing action is created that removes dead Keratinocytes (skin cells) in order to regulate the cell exfoliation rate. The moisture content of the skin is also increased significantly. This hydrates the skin cells for a brighter complexion and firmer, bouncier skin.

The result is a natural-looking complexion with an even skin colour and tone that creates an overall luminosity and smooth skin texture.

See your specialist Skin Revision Technician about the DMK Bihaku Skin Brightening Treatment today. Everyone deserves beautiful skin, no matter what their age or background.
